Title: Comment Resolution Report. SEE Services WD
and CD Registration.

Source: D. Lee – J. Garbajosa
Action: For information and action as noted

In response to Letter Ballot Summary on the Combined WD & CD Registration ballot of WD 15940 - Software Engineering – Environment Services, ISO/IEC JTC1/SC7 N2369.

BRAZIL COMMENTS

Specific descriptions, specially the technological dependent ones, could be avoided. For example: In session 6.5.4 User Communication Support Service, we suggest to change mail with messages, and to suppress "open and close connections" (with new resources we don't necessary need to do it to be plugged). Also "Internet connectivity" can be changed to "public network communication".

We accept changing “mail” by messages in item 1 of the dotted list, as suggested. Concerning the suppression “open and close connections”, this is kept as long as this operation has to be performed, regardless it is done in a public or private way.

With respect to replacing “Internet connectivity” by “public network communication”, “public network” is added as it may partially overlap with “Internet connectivity” but they are different concepts.

In session 6.1.10 Software Testing Service, we are not sure if "test data database management" (under automated support) includes data generation, which we think is necessary. We also think that cross-reference support should be included under automated support.

We reformulate the second item “Test data, cases, and scenario support”. Cross Reference is added as an automated support item: Reference traceability and cross reference

UNITED STATES COMMENTS

The Title of the Working Draft should read Title WD 15940 - Software Engineering Environment Services i.e., no hyphen.
